Tell me about yourself.

Hello, my name is Cecilia Angulo Dominguez, I am twenty-seven years old. I live in Culiacan, Sinaloa. I am master's in information science. I have studied in Informatica and master's degree of information science, I have two bootcamp, one it is in the cloud computing and the other it is in data science.

I'm a person who likes to be in constant learning and I learn quickly. I can work under pressure, and I like to practice the teamwork.

These skills I have practiced for many years, however, during my master's degree is where I have practiced them, while I was constantly learning, sometimes under pressure, for the amount of new knowledge that I was acquiring and reading updated paper to create my thesis and also to constantly working together with doctors and my classmates.

I always like to strive to finish things and be persistent in it. My objective is to occupy a position in this company to create world-changing technology that improves the life of every person on the planet.

Could you please guide me through your educational background?

I am master in information science, I have studied in Informatica and master's degree of information science, I have two bootcamp, one it is in the cloud computing and the other it is in data science.

(What are your strengths and your areas of opportunities/weaknesses professionally speaking)

I'd say one of my strengths is the effort to finish things and be persistent in it. For example, in my university I created an automation system for the computer center, that system is still working at that university or in my master's degree when I finished my thesis or even in the cloud computing bootcamp that I tried hard and I'm finishing it. I am a persistent person in everything that I commit.

What has been your greatest accomplishment?

When I created a computer system, because I made the system from beginning to end and organized the times of the project and sometimes working under pressure

and quickly learning the knowledge that I needed.

What sets you apart from other candidates?

I noticed on the job description that you're looking for someone who have experience with python and AWS platform and I have that knowledge. Also, I always like to strive to finish things and be persistent in it, Therefore I would be committed to work.

Why do you want to work at this company?

Because I share similar goals. I want to create world-changing technology that improves the life of every person on the planet.

Tell me about a challenge or conflict you've faced at work and how you dealt with it.

When I was studying the cloud computing and data science bootcamp at the same time it was a challenge when I had to do more extensive projects in both bootcamps, so I started a habit of writing the activities every morning to focus on my priorities and it helped me finish my projects.

Tell me about a time in which you demonstrated leadership skills.

Once time my classmate wanted to give up his master's degree because he did not have good communication with his advisor, so I organized a meeting, and we discussed some issues to reach some solution and all right he finished his thesis and Currently he is a computer teacher.
